TIPS FOR VIEWING THIS PRESENTATION:

1. Take advantage of the built-in **Table of Contents** by clicking on the **palette icon** (show/hide navigation pane) located just to the right of the printer icon. Or you can go up to **WINDOW**...then select **Show Bookmarks**.
2. After selecting from the menu on the left, click on the palette icon once more and the selected section will open full screen for easy viewing.
3. To go to a website on the Internet from this pdf file, right click on the web address, then select **"Open Weblink in Browser"**.

JBL™ Home Theater Surround Sound Speakers

Home Theater

Home Theater: Whether its all five channels or just a pair for the rear surrounds, AM in-ceiling speakers are ideal for home theater systems. The challenges of speaker placement are eliminated.

JBL™ HTI In-Ceiling / In-Wall Speakers

To experience true high-performance home theater or whole-house audio, you need speakers that deliver the utmost in power, performance and clarity. And that's exactly what you'll get with the JBL HTI Series In-Wall/In-Ceiling Loudspeakers! Manufactured by JBL, these home speakers are engineered with nearly 75 years of experience in designing professional movie theater audio systems. The result? A "no compromise" design with pure titanium tweeters, aluminum-alloy woofers and sophisticated crossover networks that simply blow freestanding speakers away.

Bose® 161™ speakers offer outstanding performance in a design that blends into your décor. Their Articulated Array® speaker design reproduces sound over a large area. Bose Stereo Everywhere® speaker performance lets you hear rich stereo sound almost anywhere in the room, instead of one small "sweet spot" as with most conventional speakers. Using two proprietary Twiddler™ drivers in each enclosure, 161 speakers deliver the kind of performance you expect from much larger speakers. And with their slim, elegant design, 161 speakers can be used as part of a stereo system or surround sound system. They even include customized brackets for easy installation.

Bose 161 speakers are compatible with amplifiers and receivers rated 10 to 100 watts per channel, rated 4 to 8 ohms. Each speaker measures 4 1/8" (H) x 11" (W) x 5" (D). Sold in pairs. Available in black or white.

Know the true meaning of high-performance audio with SpeakerCraft® MT Series in-wall speakers — the most accurate in-wall speaker system in the industry! This magnificent high-fidelity speaker system is comprised of dedicated left- and right-channel speakers with mirror-image tweeters. The result is an amazingly smooth high-frequency response and superb imaging characteristics. Pivoting tweeters aim the critical high frequencies towards listeners, not over their heads or at their feet. And

finely crafted enclosures and grilles allow the speakers to virtually disappear once installed! Altogether, you'll experience an extraordinarily optimized audio experience that blows other systems away.

MT Speakers are constructed of the finest materials possible, including liquid-cooled, 1" cloth dome tweeters with neodymium magnets and 6½" polypropylene cone woofers with urethane surrounds (6.1MT and 6.2MT). For more powerful performance, check out the 8.1MT which includes a ¼" polyamide dome tweeter, a 2" polypropylene cone midrange and a powerful 8" dual-voice coil polypropylene cone woofer with a rubber surround. All MT speakers are sold in matched pairs and use patented I-Beam mounting systems to cut installation time -- only six screws are needed to tighten and lock the speaker in the wall!
